

## **MUDITA GREEN-LEDGER (The Sustainability Chain)**

**Native Token: \$MUDA**

**Core Concept: Monetizing Non-Selfish Actions.**

**Whitepaper Summary: MUDITA bridges the gap between environmental ethics and economic incentives by recording "Green Deeds" on a public, immutable ledger.**

- **Proof of Regeneration: \$MUDA tokens cannot be bought or mined; they are minted through verified environmental impact. For instance, reforestation projects providing satellite proof of canopy growth are rewarded with \$MUDA.**
- **The Ethical Marketplace: A low-fee exchange for sustainable, vegan, and fair-trade products, where \$MUDA serves as the primary currency of trust.**
- **Vision: To create a financial incentive for the preservation of all living beings and the planet's ecosystem.**
